

# Xavor July Content Brief

## Speed to Production for Enterprise AI Mandates

**Campaign window:** July 2026

**Primary channels:** LinkedIn and blogs

**Excluded channels:** Webinars and email

**Funnel objective:** Consideration

**Primary CTA:** Book a Discovery Workshop

**Priority leads:** AI POC, Salesforce, ServiceNow, Data & BI, Physical AI, Oracle Agile-to-Aras migration

**Priority industries:** Medtech, life sciences, high-tech manufacturing, semiconductor, complex product manufacturing

---

## 1. Core Strategy

July content should communicate one clear idea:

**Xavor helps enterprises move AI mandates and use cases from POC to production faster.**

The market does not need more generic AI education. Enterprise buyers already have AI pressure from leadership, internal pilots, platform roadmaps, and competitive urgency. Their problem is execution: too many AI POCs are stuck, too many agents are ungoverned, data is fragmented, costs are hard to track, and platform teams do not know how to turn new AI capabilities into production workflows.

Xavor should position itself as the practical implementation partner that helps enterprises move faster because it understands the systems where AI has to work:

- Salesforce
- ServiceNow
- Aras
- Oracle Agile migration to Aras
- Data & BI
- Physical AI, edge AI, and embedded systems

### **Main message:**

Your AI mandate needs more than a pilot. Xavor gives you the platform expertise, engineering depth, data readiness, and workflow integration needed to get AI use cases into production faster.

---

## 2. Audience and Buyer Mindset

### **Primary buyers**

CTOs, CIOs, CDOs, Chief AI Officers, VPs of Engineering, VPs of IT, VPs of Digital Transformation, manufacturing technology leaders, product engineering leaders, Salesforce owners, ServiceNow owners, Aras/PLM leaders, Oracle Agile owners, and Data & BI leaders.

## Buyer mindset

They are not asking, "Should we use AI?"

They are asking:

- Which AI use cases can we actually put into production?
- Why are our POCs not scaling?
- Are our Salesforce, ServiceNow, Aras, Oracle Agile, and data environments ready?
- Can we govern agents before they create risk?
- Can we measure AI cost and business value?
- Do we have the engineering capacity to move fast?

Xavor content should make the reader think:

**"We need a structured Discovery Workshop to figure out our fastest path to production."**

---

## 3. Key Proof Points Writers Should Use

Use these numbers across LinkedIn and blogs to support the July narrative:

1. **88% of AI agent pilots fail to reach production.**  
Core proof point for the POC-to-production gap.
2. **Top blockers include evaluation gaps at 64%, governance friction at 57%, and model reliability at 51%.**  
Shows that AI failure is about readiness, not just models.
3. **79% of organizations face AI adoption challenges.**  
AI adoption is widespread, but successful adoption is still hard.
4. **54% of C-suite executives say AI adoption is "tearing their company apart."**  
Use this to show internal tension around ownership, governance, skills, and accountability.
5. **Only 21% of enterprises report mature governance models for autonomous AI agents.**  
Strong proof for ServiceNow, Salesforce, and AI governance content.
6. **Two-thirds of CIOs and CTOs are accountable for AI systems they do not fully control.**  
Use the phrase: "accountability without control."
7. **Only 11% of tech CxOs feel fully ready for the expected 38% increase in AI agent deployments by 2027.**  
Creates urgency around agent readiness.
8. **98% of FinOps teams now manage AI spend, up from 31% two years ago.**  
AI cost visibility is now a production-readiness issue.
9. **Salesforce acquired Fin for approximately \$3.6B, and Fin's AI Agent resolves an average of 76% of support volume end-to-end.**  
Use for Agentforce and Salesforce AI readiness.

10. **Oracle reported \$638B in remaining performance obligations, OCI IaaS revenue up 93%, and Oracle Multicloud AI Database up 404%.**

Use to frame Oracle Agile-to-Aras migration as part of AI-ready modernization.

11. **Robotics companies have raised \$55.8B so far in 2026, and NEURA Robotics raised up to \$1.4B.**

Use to show Physical AI is moving from hype to readiness planning.

---

## 4. July Content Pillars

### Pillar 1: AI POC to Production

**Message:**

Most enterprises do not need more AI pilots. They need a faster, safer path from AI POC to production.

**Writer direction:**

Focus on why AI POCs fail, what production readiness looks like, how to prioritize use cases, and why governance, data, workflow ownership, evaluation, and engineering capacity matter from day one.

**Lead goal:** AI POC leads

**CTA:** Book a Discovery Workshop

---

### Pillar 2: Salesforce Agentforce and AI Implementation

**Message:**

Agentforce can accelerate service, sales, and customer workflows, but only if the Salesforce environment is ready.

**Writer direction:**

Use Salesforce's Agentforce momentum and Fin acquisition as signals that customer service AI is moving into production. Do not write product-news summaries. Focus on implementation readiness: data quality, knowledge readiness, workflow integration, escalation design, governance, and custom development.

**Lead goal:** Salesforce leads

**CTA:** Book a Discovery Workshop

---

### Pillar 3: ServiceNow AI Specialists and Governance

**Message:**

ServiceNow AI can automate enterprise workflows, but speed to production depends on workflow readiness, governance, access control, and integration.

**Writer direction:**

Focus on AI Specialists, Action Fabric, AI Control Tower, Microsoft ecosystem governance, and the risk of agent sprawl. Show that ServiceNow customers need help deciding which workflows are ready for AI and which need cleanup first.

**Lead goal:** ServiceNow leads  
**CTA:** Book a Discovery Workshop

---

## **Pillar 4: Data & BI as the Foundation for AI Production**

**Message:**  
If your data is fragmented, your AI will stay stuck in POC.

**Writer direction:**  
Position Data & BI as AI infrastructure, not reporting. Focus on trusted data, governed access, semantic consistency, data discovery, BI modernization, RAG quality, and the role of data teams in making AI production-ready.

**Lead goal:** Data & BI leads  
**CTA:** Book a Discovery Workshop

---

## **Pillar 5: Oracle Agile Migration to Aras**

**Message:**  
Legacy Oracle Agile environments can slow down AI-ready product development. Migrating to Aras is a strategic path toward modern, connected, AI-ready PLM.

**Writer direction:**  
Do not frame Agile migration as a basic technical upgrade. Frame it as product data modernization for health and manufacturing companies. Focus on clean product data, traceability, engineering workflow visibility, integration, migration risk reduction, and future AI-enabled PLM.

**Lead goal:** Oracle Agile-to-Aras migration leads  
**CTA:** Book a Discovery Workshop

---

## **Pillar 6: Physical AI and Edge Readiness**

**Message:**  
Physical AI will not reach production without edge readiness, embedded engineering, OT/IT integration, and trusted operational data.

**Writer direction:**  
Avoid robotics hype. Focus on what manufacturers need before autonomous systems can work: edge infrastructure, sensors, embedded systems, operational data, factory integration, digital twins, and OT/IT alignment.

**Lead goal:** Physical AI leads  
**CTA:** Book a Discovery Workshop

---

## 5. Recommended July Flow

### Week 1: AI POC to Production

Own the main July narrative: enterprises need speed from AI mandate to production. Use the 88% pilot failure stat and the “accountability without control” theme.

### Week 2: Salesforce and ServiceNow

Show Xavor’s depth in the platforms where agentic workflows are becoming real. Salesforce content should focus on Agentforce readiness. ServiceNow content should focus on AI Specialists, governance, and workflow readiness.

### Week 3: Data & BI and Oracle Agile to Aras

Show that AI speed depends on modern data and product lifecycle foundations. Tie Data & BI to agent-ready data. Tie Oracle Agile-to-Aras migration to AI-ready PLM.

### Week 4: Physical AI and Industry Relevance

Connect Xavor’s health and manufacturing expertise to edge AI, Physical AI, embedded systems, semiconductor, medtech, life sciences, and high-tech manufacturing.

---

## 6. CTA Direction

Use one unified CTA:

### Book a Discovery Workshop with Xavor.

The workshop should be positioned as a practical session to identify the fastest path from AI mandate to production.

It should help buyers clarify:

- Which AI use cases are production-ready
  - Which platform, data, workflow, or governance blockers exist
  - Which systems need integration or modernization
  - What a 30–90 day roadmap could look like
  - Where Xavor can help with implementation, development, migration, or engineering execution
- 

## 7. Writing Guardrails

### Do

- Lead with buyer pain.
- Tie every trend to speed to production.
- Use real Sentinel numbers.

- Show Xavor's implementation and development depth.
- Make Salesforce, ServiceNow, Aras, Agile migration, Data & BI, and Physical AI feel connected.
- Reference health and manufacturing contexts where relevant.
- Push toward Discovery Workshop.

### **Do not**

- Write generic AI awareness content.
  - Summarize platform news without buyer implications.
  - Treat the pillars as disconnected services.
  - Over-focus on compliance without tying it to production.
  - Write about Physical AI as robotics hype.
  - Use "learn more" as the main CTA.
- 

## **Final Direction**

July content should make one point clear:

**Enterprises do not need more AI experimentation. They need speed to production.**

Xavor should be positioned as the partner that helps health and manufacturing enterprises turn AI mandates into production-ready systems through platform expertise, data readiness, workflow integration, governance, migration experience, and engineering execution.
